SUMMARY

Data Analyst with 3+ years of experience in SQL, Python, Excel, Power BI, and Tableau. Delivered measurable results including 60% faster reporting, 15% higher forecasting accuracy, and 18% improved marketing ROI. Proficient in data cleaning, ETL, KPI tracking, and statistical analysis. Experienced with MySQL and PostgreSQL databases. Collaborates with cross-functional teams to provide accurate, timely analytics that support informed business decisions and operational efficiency across diverse industries.

TECHNICAL SKILLS

Data Engineering & ETL: SQL (MySQL, PostgreSQL), dbt, Airflow, SSIS, Spark, Kafka, Python (Pandas, NumPy), Power Query
Cloud & Database: AWS (S3, RDS, Glue), Azure Data Factory, GCP Big Query, relational & multi-terabyte databases, query optimization
Analytics & Visualization: Power BI, Tableau, Excel (PivotTables, Power Query, VBA), DAX, KPI tracking
Data Governance & Quality: Data wrangling, Normalization, Validation Pipelines, Metadata Management, Compliance Reporting, Alation
Statistics & ML: Regression, Correlation, Forecasting, Anomaly detection, A/B testing, Campaign Performance, Fraud Detection
Reporting & Dashboarding: Creating dashboards, Generating Reports, Summarizing insights for stakeholders, Visual storytelling
Automation & Scripting: Python scripting for repetitive tasks, Excel macros, Jupyter notebooks
Methodologies & Tools: Agile Methodology, Scrum, JIRA, Git, Jenkins, Terraform, Confluence

PROFESSIONAL EXPERIENCE

Tenet Healthcare, TX, USA **Mar 2024 - Current**
Data Analyst

- Designed interactive Power BI and Tableau dashboards integrated with SQL, Python and Excel, reducing reporting turnaround by 60% and enabling executives across eight divisions to monitor KPIs in real time.
- Built automated ETL workflows and data validation pipelines with Python and SQL, improving forecasting accuracy by 15% and driving efficiency across supply chain operations and targeted marketing strategies.
- Optimized complex queries on MySQL and PostgreSQL production systems, improving reporting speed by 50% and ensuring availability of financial and operational data for cross-functional teams.
- Conducted regression and correlation analysis on a \$3M marketing campaign budget, boosting ROI by 18% and increasing customer conversions by 12% across priority markets and high-value segments.
- Partnered with finance, operations, and IT teams to align enterprise-level reporting systems with governance standards, strengthening data reliability and supporting strategic decision-making.

Hexaware Technologies **Jan 2020 - Jun 2022**
Data Analyst

- Built anomaly detection dashboards in Power BI integrated with SQL pipelines, improving fraud risk monitoring speed by 25% and strengthening financial risk prevention across service operations.
- Automated compliance workflows using Python scripts and Excel macros, saving 400+ analyst hours annually, reducing manual reporting errors by 95%, and ensuring timely regulatory submissions.
- Re-engineered SQL queries and indexing strategies for multi-terabyte datasets, reducing retrieval time by 30% and improving scalability of reporting systems across analytics teams.
- Leveraged KPI tracking and A/B testing to improve marketing ROI by 15%, identifying high-value customer segments and optimizing targeted acquisition strategies.
- Developed structured data cleaning, deduplication, and governance workflows using SQL and Python, ensuring 99% accuracy for analytics, compliance, and executive-level decision-making.

EDUCATION

Master of Science in Computer Science **Aug 2024**
Oklahoma Christian University, Edmond, USA

Bachelor of Technology in Information Technology **May 2022**
DY Patil College of Engineering, Pune, India

PROJECTS

Predictive Sales Dashboard

- Engineered an end-to-end analytics solution by importing, cleaning, and processing raw sales data with Power Query. Developed a robust data model by writing complex DAX formulas to create calculated tables and measures, enabling comprehensive analysis.
- Designed and built a dynamic, multi-page sales dashboard featuring advanced charts, geographic maps, and interactive slicers. This transformed complex datasets into clear, actionable insights for stakeholders.
- Implemented predictive analysis to project future sales trends, providing data-driven guidance for strategic planning.

Real-Time Fraud Detection System

- Built a Python-based Isolation Forest model analysing 1M+ transactions daily, improving fraud detection speed by 30% and reducing false positives by 12% through automated anomaly scoring.
- Developed a simulated streaming pipeline replicating Apache Spark and Kafka environments, processing 10K transactions/minute, achieving 99% uptime and ensuring scalable real-time processing of high-volume datasets.
- Deployed the ML model into production for transaction scoring, generating automated alerts with <5 seconds latency, reducing potential fraud losses by an estimated \$200K annually.
